4 Product breakdown

Bank of England Base Rate Tracker Loans includes loans issued at a discount or premium to base rate.

All loans in the Discount category are linked to SVR.

5 Payment Type

Most loans that are not fully repayment mortgages comprise an interest only portion, on which there are no scheduled principal repayments and a repayment portion for which there is a scheduled amortisation.

6 Loan to Value (LTV) at Last Valuation

Prior to 2008, further advances may be made on existing loans based on the indexed LTV without carrying out a formal valuation. This occasionally gives rise to the unindexed LTV recording an unrealistically high LTV. Indexed and unindexed LTVs include a all further advances on a loan - but exclude flexible

7 Defaults

For the purposes of the Bank of England Market Notice dated 30th November 2010 "defaults" is defined as properties having been taken into possession.

On any trust calculation date, the total principal receipts received during the immediately preceding trust calculation period divided by the aggregate current balance of the loans comprised in the trust property calculated on the previous trust calculation date in respect of the previous trust calculation period.

9 1 month annualised CPR

Calculated as $1 - ((1 - R)^{12})$ where R is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (ii) the aggregate outstanding principal balance of the loans in the expected portfolio as at the start of that period.

10 3 month average CPR

The total principal receipts received during the immediately preceding trust calculation period for the last 3 months divided by the average aggregate current balance of the last 3 months of the loans comprised in the trust property.

11 3 month annualised CPR

Calculated as $1 - ((1 - R)^4)$ where R is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (ii) the average aggregate outstanding principal balance over the last 3 months of the loans in the expected portfolio as at the start of that period.

12 12 month average CPR

The total principal receipts received during the immediately preceding trust calculation period for the last 12 months divided by the average aggregate current balance of the last 12 months of the loans comprised in the trust property.

13 Calculation of Minimum Seller Share (as per page 3)

X = Current balance of loans in the trust property multiplied by 4%

Y = Flexible draw capacity (Flexible drawdown reservoir of live sub-accounts), multiplied by 8%, multiplied by 3

Z = Balance of Flexible redraws and further advances covered by CCA

14 Calculation of Excess Spread

Excess spread for each of the individual issuer vehicles is calculated by dividing [excess cash available for payment below the reserve fund in the waterfall] by [the issuer's outstanding intercompany loans]. Excess spread for the Funding vehicle is calculated similarly, by dividing [the sum of all excess cash available for payments below each of the issuer's reserve funds in their respective waterfalls] by [the sum of all intercompany loans outstanding]
