Notes**1 Current number of mortgages**

This is the sum of all product holdings secured by a Borrower(s) on a single property.

2 Current value of mortgages

Includes all amounts of principal, interest and fees as yet unpaid by the Borrower.

3 Funding 1 Share

The percentage Funding 1 Share is calculated net of accrued interest.

4 Seasoning

This is the age of the Loan at the report date in months based on the main mortgage completion date.

Main mortgage completion date is the date the Borrower first took out a loan on the secured property. The initial loan may have been repaid and replaced by subsequent lending under the same mortgage agreement and updated terms and conditions.

5 Remaining term

This is the remaining term of the Loan at the report date in months.

6 Product breakdown

Bank of England Base Rate Tracker Loans includes Loans issued at a discount or premium to base rate.

All Loans in the discount category are linked to SVR.

7 Payment Type

Most Loans that are not fully repayment mortgages comprise an interest only portion, on which there are no scheduled principal repayments and a repayment portion for which there is a scheduled amortisation.

8 Loan to Value (LTV) at last valuation

Prior to 2008, Further Advances were made on existing Loans based on the indexed LTV without carrying out a formal valuation. This occasionally gives rise to the unindexed LTV recording an unrealistically high LTV. Indexed and unindexed LTVs include all Further Advances on a Loan - but exclude any flexible drawdown reservoir.

9 Defaults

For the purpose of the Bank of England Market Notice dated 30 November 2010 "defaults" is defined as properties taken into possession.

10 X

Current balance of Loans in the portfolio multiplied by 3.4%

11 Y

Flexible draw capacity (flexible drawdown reservoir of live sub-accounts) multiplied by 8% multiplied by 3%

12 Z

Balance of flexible redraws and Further Advances covered by CCA

13 Excess spread calculation

Excess spreads is calculated by dividing (excess cash available for payments below the General Reserve Fund in the waterfall) by (the Funding 1 Share)

14 1 month CPR

On any trust calculation date, the total principal receipts received during the immediately preceding trust calculation period divided by the aggregate current balance of the loans comprised in the trust property calculated on the previous trust calculation date in respect of the previous trust calculation period.

15 1 month annualised CPR

Calculated as $1 - ((1 - R) ^ {12})$ where R is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (ii) the aggregate outstanding principal balance of the loans in the expected portfolio as at the start of that period.

16 3 month average CPR

The total principal receipts received during the immediately preceding trust calculation period for the last 3 months divided by the average aggregate current balance of the last 3 months of the loans comprised in the trust property

17 3 month annualised CPR

Calculated as $1 - ((1 - R) ^ {4})$ where R is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (ii) the average aggregate outstanding principal balance over the last 3 months of the loans in the expected portfolio as at the start of that period.

18 12 month average CPR

The total principal receipts received during the immediately preceding trust calculation period for the last 12 months divided by the average aggregate current balance of the last 12 months of the loans comprised in the trust property
