

Good for the world, good for you

Evidence increasingly shows that sustainable investing can help you make the most of your money in more than one way, delivering good returns as well as helping to do good in a broader sense.

Research by Morningstar, comparing 4,900 funds investing in different types of shares and global regions found that nearly 60% of sustainable investments outperformed their traditional peers over the ten years to the end of 2019. It was a similar story over shorter time periods too with nearly two-thirds of sustainable investments outperforming over one, three and five years^{1*}.

If you're not already familiar, sustainable investments are those that have strong environmental, social and governance (ESG) credentials.

The ESG credentials:

Environmental

How companies approach climate change and how their operations impact the planet through things like waste, contamination and deforestation.

Social

How a company operates in its community, covering matters such as working conditions, health and safety, employee relations, human rights and modern slavery.

Governance

Company leadership in issues including executive pay, bribery and corruption, diversity culture and supporting policies, political lobbying and payment of taxes.

* Past performance is not a reliable guide for future performance. Investing is generally for the medium-to-long term.

Sustainable investing in the age of COVID-19

The ten-year period covered by that research was one of largely positive market growth. On the other hand, 2020 has proved a sterner test for investors due to the global economic impact of the COVID-19 pandemic. But here too investments with strong ESG credentials appear to have fared favourably when compared with more conventional peers.

The MSCI ACWI ESG Universal Index is a global investment index made up of companies demonstrating both a robust ESG profile as well as a positive trend in improving that profile. It increased by 5.31% between the start of January and the end of August 2020, ahead of the wider MSCI AC World Index –which grew by 3.64% over the same period². Remember, though, that past performance is not a guide to future performance.

How sustainability can help boost profits

There are many good reasons why companies striving to make a positive impact on the world can also be better placed to deliver positive financial returns. Here are just a few of them.

⁽²⁾ Trustnet – ESG funds beating their conventional rivals in most sectors this year, 3/9/2020

Reducing costs

Companies focused on sustainability will often act to reduce their use of energy and, in turn, greenhouse gas emissions. For example, the Santander Group is working to become carbon neutral and expects to cut all emissions in half by 2025. In doing so, as a group, we have cut our use of electricity and our buildings are being made more energy efficient³. A positive side-effect of changes like these tends to be a long-term reduction in costs.

Increasing productivity

According to employee benefit specialists at Mercer, by 2029, Millennials and Generation Z will form 72% of the world's workforce, compared to 52% in 2019. This younger generation places a strong importance on working at companies that focus on sustainability. Businesses with strong ESG credentials should be better placed to retain and attract like-minded employees. Being an active part of something they believe in is likely to foster greater motivation and performance than work being "just a job"⁴.

Protecting reputation

Companies with weak ESG practices may be more prone to controversies and regulatory concerns that can damage their reputation and market value. According to Bank of America, a total of \$500bn has been wiped off the value of American companies over the last five years by ESG controversies⁵. Ethical controversies can put companies at more risk of consumer boycotts too. Research amongst UK consumers has shown more than half who are disappointed by a brand's words or actions on a social issue make a complaint, with that number rising to 75% among Generation Z⁶. What brands stand for and how they act are increasingly high profile with social media providing the ideal platform to share views and experiences.

Future proofing

Rising to sustainability challenges can drive positive business change too. Fossil fuel companies, for example, face continuing protest from environmental groups. Many of the biggest are now investing heavily, each spending billions of dollars on projects to develop renewable energy resources, with wind and solar power playing an increasingly important role⁷.

Let's be clear

Different generations are often given different labels for research and marketing purposes. Broadly speaking, Millennials are the generation born in the 1980s and early to mid-1990s who are now dominating the global workforce. Generation Z are the generation born since. They are now coming of age, entering the workforce and so rising in prominence and influence in the world.

Sustainable investing is here to stay

Institutional investors – those who invest money on behalf of individuals through pension and investment funds, are increasingly clear on the financial as well as the social benefits of sustainable investing and acting on them too.

Research conducted with 70 senior executives at 43 global large-scale professional investment firms, including fund managers and government pension funds in the Netherlands, Japan and Sweden, found “that ESG was almost universally top of mind for these executives.” Many of those interviewed described how they were integrating sustainability into their investment criteria⁸.

Making it work for you

If you're convinced on the potential benefits of sustainable investment, there's a lot to think about when it comes to selecting the right approach you, from being clear on the issues that matter to you to finding the right investment provider. A financial adviser can help.
