Total Capital ratio	16.8%	17.4%

Common Equity Tier 1 ratio decreased from 11.6% to 11.2% at 30 June 2016 primarily driven by the increase in Risk Weighted Assets (credit risk £1.6bn, counterparty credit risk £0.3bn, CVA, £0.3bn and Market Risk £0.4bn) and in the Common Equity Tier 1 (CET1) capital regulatory adjustments which were adversely impacted by market volatility and rates in the last few weeks of June.

Leverage Ratio

The following table summarises the Company's end point CRD IV Tier 1 Leverage Ratio at 30 June 2016, 31 December 2015 and the monthly average for three months ended 30 June 2016, which is consistent with the Leverage Ratio applied to large UK banks under the framework defined by the Financial Policy Committee's review of the Leverage Ratio. Further detail on the 30 June 2016 Leverage exposure is included in the EBA-defined Disclosures section of this document.

	Average Q2 2016 £m	30 June 2016 £m	31 December 2015 £m

The Leverage Ratio decreased slightly during the six months ended 30 June 2016 principally driven by increased exposures and a reduction in the End Point Tier 1 Capital.

Probability of Default ('PD') disclosures

The following tables show the distribution by credit quality of the value of exposures, credit risk parameters and capital for the Company's IRB portfolios, by exposure class. This excludes CVA and specialised lending, equity exposures and securitisation portfolios where PD is not estimated for RWA calculations – at 30 June 2016, the RWA for such portfolios was £8.8bn. The initial table below details the relationship between the IRB model portfolio and exposure class.

IRB Model Portfolio	Exposure class
Residential Mortgages	Retail Mortgages
Unsecured Personal Loans	Other Retail
Bank Accounts	Qualifying Revolving Retail Exposures
Social Housing	Corporates
Corporate	Corporates
Global Models – Banks	Institutions
Global Models – Insurers	Corporates
Global Models – Large Corporates	Corporates

The Company uses a single rating scale to provide a consistent approach for reporting default risk across all the credit risk portfolios. The scale is comprised of eight grades for non-defaulted exposures numbered from 9 (lowest risk) to 2 (highest risk). In the tables below, the PD bands and associated PD ranges reflect those used for PRA reporting purposes. The PD band numbering is inverted, with 1 representing the lowest risk, and the definition of default is in accordance with PRA rules.

For the corporates and institutions exposure classes, the PD bands for an individual counterparty exposure are determined by the through-the-cycle PD value assigned to the counterparty exposures. This through-the-cycle PD is also used in the calculation of average PD, RWAs and average risk weighting for these classes. For the retail mortgages, qualifying revolving retail exposures and other retail exposure classes, the PD band and PD range reflect the point-in-time PD of an individual counterparty exposure, but the PD used for average PD, RWAs and average risk weighting is cycle-adjusted and hence can be different to the point-in-time PD. This results in the average PD being outside the specified PD range for some PD bands.

For all exposure classes, the average PD and average LGD reflect exposure at default-weighted values. The analysis for corporates and institutions includes both banking book exposures and counterparty risk exposures.

EBA-defined Disclosures

The following sections of this document set out disclosures required under CRD IV for the Company defined by EBA implementing technical standards on the disclosure of Own Funds and the Leverage Ratio. These items are presented in the defined EBA template format, with the exception of the balance sheet reconciliation (where no format is prescribed). All disclosures cover the 30 June 2016 position.

Own Funds disclosure – balance sheet reconciliation

The scope of consolidation and method for consolidation of the Santander UK Group Holdings plc balance sheet is substantially the same as that used for Regulatory purposes.

The sole difference is the consolidation for Regulatory purposes of trust preferred entities, which were set up by Santander UK solely for the issuance of trust preferred securities to third parties and to lend the funds raised onto Santander UK plc. These securities are recognised as liabilities for regulatory purposes and are classified as 'US\$1,000m Non-Cumulative Trust Preferred Securities'. For the Santander UK Group Holdings plc balance sheet, under IFRS 10, the trust preferred entities are not consolidated. Instead the subordinated liabilities issued by Santander UK plc to the trust preferred entities, which are for the same amount and terms as the notes issued to third parties from the trust preferred entities, are recognised as liabilities of the Santander UK Group holding plc group and classified as subordinated liabilities. These are classified as '8.963% Subordinated notes 2030 (US\$1,000m)'.

A reconciliation of regulatory own funds to the relevant balance sheet items for Santander UK Group Holdings plc is included in the table below. This outlines the impact of the difference in scope of consolidation outlined above.
