Definitions
1 Arrears
This arrears multiplier is calculated as the arrears amount (which is the difference between the expected monthly repayments and the amount that has actually been paid, i.e. a total of under and/or over payments ) divided by the monthly amount repayable. It is recalculated every time the arrears amount changes, i.e. on the date when a payment is due.
For the p
31 month CPR
On any trust calculation date, the total principal receipts received during the immediately preceding trust calculation period divided by the aggregate
current balance of the loans comprised in the trust property calculated on the previous trust calculation dat in respect of the revious trust
41 month annualised CPR
Calculated as $1-\left((1-R)^{\wedge} 12\right)$ where $R$ is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (ii) the
aggregate outstanding principal balance of tee bars ine expected poriors as at the start of that period.
53 month average CPR
he total principal receipts received during the immediately preceding trust calculation period for the last 3 months divided by the average aggregate
63 month annualised CPR
3 month annualised CPR
Calculated as $1-(1-\mathrm{R}) \wedge$ ) 4 where R is (i) total principal receipts received scheduled and unscheduled during the relevant period, divided by (i) the
average aggregate oustanding principal balance over the last 3 months of the loans in the expected pootifolio as at the start of that period.
12 month average CPR
The total principal receipt
current balance of the last 12 monthth of the immediately preceding trust calculation period for the last 12 months divided by the average aggregate
