Notes

1 Current value of mortgages

Includes all amounts of principal, interest and fees as yet unpaid by the borrower. Current Value of Mortgage Loans in Pool in 'Mortgage Loan Profile' and 'Trust Asset' is different due to the 'Mortgage Loan Profile' value including the accrued interest over the reporting period.

2 Funding Share

The percentage funding share is calculated net of accrued interest.

3 Remaining term

This is the remaining term of the loan at the report date in months .

4 Product breakdown

Bank of England Base Rate Tracker Loans includes loans issued at a discount or premium to base rate. All loans in the Discount category are linked to SVR.

5 Payment Type

Most loans that are not fully repayment mortgages comprise an interest only portion, on which there are no scheduled principal repayments and a repayment portion for which there is a scheduled amortisation.

6 Loan to Value (LTV) at Last Valuation

Prior to 2008, further advances may be made on existing loans based on the indexed LTV without carrying out a formal valuation. This occasionally gives rise to the unindexed LTV recording an unrealistically high LTV. Indexed and unindexed LTVs include a all further advances on a loan - but exclude flexible drawdown reservoir

7 Defaults

For the purposes of the Bank of England Market Notice dated 30th November 2010 "defaults" is defined as properties having been taken into possession.

8 CPR

The splits between scheduled and unscheduled principal receipts for a given month are derived from a forecast of scheduled principal receipts from the earlier month and therefore may not necessarily equal the actual amount of scheduled principal receipts during the period. For a period in which a trust replenishment occurs, a straight-lining method is used to estimate the scheduled principal receipts received on the replenished pool for the remainder of the month.

9 Calculation of Minimum Seller Share (as per page 3)

X = Current balance of loans in the trust property multiplied by 4%

Y = Flexible draw capacity (Flexible drawdown reservoir of live sub-accounts), multiplied by 8%, multiplied by 3

Z = Balance of Flexible redraws and further advances covered by CCA

10 Calculation of Excess Spread

Excess spread for each of the individual issuer vehicles is calculated by dividing [excess cash available for payment below the reserve fund in the waterfall] by [the issuer's outstanding intercompany loans]. Excess spread for the Funding vehicle is calculated similarly, by dividing [the sum of all excess cash available for payments below each of the issuer's reserve funds in their respective waterfalls] by [the sum of all intercompany loans outstanding]
